

## INTRODUCING THE NEW EASY-CLEAN DAYLITER SHADE

The Dayliter Shading System allows for full control and delivery of glare-free daylight, an element with significant positive impact on patient outcomes.

Following feedback from both the design community and healthcare professionals the rotating fabric lightshelf now has an “easy-clean” feature allowing the lightshelf to be lowered for cleaning in place.

This new design feature can be handled by a single person without the removal of a fascia or other components.

1. Lift, tilt and slide forward to release lightshelf
2. Rotate lightshelf down to vertical position
3. Easily clean top surface before reversing rotation and slotting lightshelf back into operating position
